ennVee
Oracle E-Business Suite Security Assessment
Validate & Enhance Critical ERP Systems Security

ennVee's E-Business Suite (EBS) security assessment services are designed to evaluate and enhance the security of your critical ERP systems. Our services provide a comprehensive review of the ERP system's security posture, including its configuration, architecture, access controls, user management, and overall data protection measures.

The assessment identifies risks and vulnerabilities within the end-to-end EBS ERP environment, providing a better understanding of security weaknesses along with recommended remediation measures to ensure the protection of sensitive data and the prevention of unauthorized access or breaches.

Our Oracle EBS security assessments are essential for ensuring the security and integrity of an organization's critical ERP environment. By conducting these assessments, organizations can proactively mitigate potential risks and prevent unauthorized access. Moreover, it helps in establishing a robust security posture that safeguards against evolving cyber threats and unauthorized activities.

Regular EBS security assessments enable organizations to stay abreast of evolving security standards and adapt their security measures accordingly, ensuring that their Oracle systems remain resilient in the face of emerging threats.

The ennVee Approach:

Our comprehensive approach considers a holistic assessment of your EBS production environment, executing an in-depth security assessment and review through,

- Architectural workshops

- Configuration assessments

- Access controls reviews

- Data protection and encryption assessments

- Network security reviews

Workstream Assessment Scope

Our assessment covers key areas critical to system security, including,

- ✓ Web & Application Tier Security
- ✓ Database Security
- ✓ EBS Applications Security
- ✓ Operating System Security
- ✓ Infrastructure / Network Security
- ✓ Cloud Infrastructure Security

Assessment Outcomes:

ennVee's security assessments deliver tangible outcomes for your organization, including:

- A report outlining identified risks within the Oracle ERP system, including potential entry points for unauthorized access, misconfigurations, and other security weaknesses.

- A detailed analysis of the identified vulnerabilities, categorizing them based on severity and potential impact on the system and organization.

- A comprehensive set of recommendations to address the identified vulnerabilities along with a prioritized plan for remediation.

- An analysis of the existing security policies and processes, along with recommendations for improvements or enhancements.

- A high-level executive summary of the assessment findings, key risks, and recommended actions tailored for executive stakeholders.

These outputs serve as the foundation for improving the security posture of your Oracle EBS environment, providing the necessary details to implement the changes and enhancements to better protect sensitive data and critical business processes.
