

# ennSCM

## Modern Warehouse Execution. Delivered at Scale.

Inventory Visibility • Multi-Warehouse • Real-Time Sync

ennSCM is an enterprise Supply Chain Execution platform designed to help organizations streamline warehouse operations, improve inventory control, and support scalable fulfillment across locations. Built to solve real warehouse problems without overcomplicating the ecosystem, ennSCM delivers real operational impact from day one.

## Field-Proven at Enterprise Scale

**ERP-Integrated**  
Enterprise ERP Ecosystems

**Real-Time Sync**  
Live Inventory & Shipment Tracking

**Enterprise Scale**  
Complexity & Variability, Handled

**Floor-Ready**  
Speed, Usability & Adoption

**In Production Today:** ennSCM currently runs the warehouse operations of an enterprise customer with locations across 20+ countries — on a single platform.

## Capabilities

- ✓ **End-to-end inventory visibility**  
across warehouse, location, lot, and serial

✓ **Multi-warehouse operations**  
with flexible zone and bin management

✓ **Seamless inbound processing**  
driven by PO / ASN receiving

✓ **Intelligent inventory movements,**  
adjustments, and approvals

✓ **Robust cycle counting**  
— full, location-based, item-based, and blind counts

✓ **Efficient outbound execution**  
— order release, picking, short-pick handling

✓ **Pack & Ship capabilities**  
with carrier API integration

✓ **Real-time ERP synchronization**  
with shipment tracking

## Operational Challenges ennSCM Addresses

| Common Challenge                                               | How ennSCM Addresses it                                                     |
|----------------------------------------------------------------|-----------------------------------------------------------------------------|
| Limited visibility into inventory across locations             | ➤ End-to-end inventory visibility by warehouse, location, lot, and serial   |
| Legacy warehouse systems that restrict flexibility             | ➤ Flexible multi-warehouse operations with configurable zone/bin management |
| Manual processes that impact productivity                      | ➤ Intelligent, system-driven inbound, movement, and outbound execution      |
| Inconsistent execution across facilities                       | ➤ Standardized processes with real-time ERP synchronization                 |
| Difficulty scaling operations as fulfillment requirements grow | ➤ Enterprise-grade architecture built for scale and operational variability |

ennSCM provides a modern, practical approach to warehouse execution — helping organizations improve visibility, standardize processes, and support operational growth.
