

# JD EDWARDS RELEASE 25

*Release 25 is here! Exciting new features to JD Edwards!*

## APPLICATION ENHANCEMENTS

### FINANCIALS

- Delinquency Fees assignment to the Business Unit of Invoice
- Increased Range of Account IDs

Your JDE system can now accommodate larger account histories and seamlessly integrate accounts from acquisitions or mergers.

### PROCUREMENT ENHANCEMENTS

- Procure to Pay Integrated with Warehouse
- Procure to Pay Process Model Template

Enterprise Automation for Procure-to-Pay, integrated with warehouse operations, offers seamless automation, data-driven insights, and customized process flows.

### ESG

- Sustainability Foundation and Scope 1 Stationary Emissions

Automatically collect fuel usage data from stationary combustion sources through JD Edwards transactions, and track it within the Sustainability Activity Ledger.

### SALES

- Order to Cash Integrated with Warehouse
- Order to Cash Process Model Template

New Enterprise Automation powers optimized task sequencing, improved order status visibility, and a flexible framework for tailored workflows to meet business needs.

### WAREHOUSE MANAGEMENT

- License Plate Workbench Usability Enhancements

View and manage date and time details, search and filter records by date, and access additional applications for efficient license plate management of loose items.

## TOOL ENHANCEMENTS

### DIGITAL TRANSFORMATION

- **Enterprise Process Modeler:** Define, monitor, and measure essential operational processes.
- **Return System Values in Orchestration Outputs:** Include system data like environment and user ID in orchestration outputs.
- **Call an Orchestration from a Row/Form Exit:** Launch orchestrations, notifications, and extensions from form/row exits.
- **List of Criteria Variables in Orchestration Rules:** Accept lists of criteria as variables in Orchestrator Rule steps.
- **Text and Images on EnterpriseOne Pages:** Add text and images to augment EnterpriseOne pages.
- **Enhanced Data Access Driver for Multiple Environments:** Connect to multiple environments for unified data modeling and analysis.

## SYSTEM ADMINISTRATION

- **Server Manager Performance Workbench:** Summarize log files directly via Server Manager, eliminating the need for manual downloads.
- **Server Manager - Developer Foundation & Interface:** Centralized access for developers to logs and logging controls, with admin-defined user management via Server Manager.
- **Development Client Simplification - Centralized Web Tier:** Simplifies JDE Development Client by relocating application processing to a centralized web server.
- **JD Edwards Update Manager - Custom Multi-Platform Deliverable:** Create and apply custom multi-platform packages without a Deployment Server.
- **JD Edwards Update Manager - Web Planner ESU:** Apply critical updates via the EnterpriseOne web client, eliminating the need for a Windows Deployment Server.
- **JD Edwards Update Manager - Reset Merges of Updates:** Allows quick resets of merges in updates, helping rerun updates in refreshed environments.
- **Optimized Full Package Build Performance:** Reduces full package build times by only rebuilding changed business functions.
- **Package Build: iSeries Library Description:** Adds library description to distinguish package libraries on iSeries.
- **Package Build:** Port Number on Output PDF: Automatically includes JDENET port number in the package build PDF report, saving administrative time.
- **Package Deployment Through Orchestration:** Automates object life-cycle deployment via JDE Orchestrations with sample deployment workflows.
- **Update Package: Default Parent Package:** Automatically selects the active package as the default parent when defining update packages.
- **UDO Altering:** Allows renaming and changing system/product codes for User Defined Objects at any time.
- **Real-Time Media Object Access:** Enables viewing of media objects from external storage without transferring them to the database.

## SECURITY

- **Allowed Domains and Attributes for Content Security Policy:** Securely integrate external content by specifying trusted domains and attributes, minimizing risks from untrusted sources.

## PLATFORM

- **One-Click Enhancements:** Now supports centralized configuration and web servers for Development Clients, streamlining setup for One-Click environments.
- **Platform Certifications:** Ensures compatibility with the latest Oracle and third-party platform components, maintaining a fully functional and supported technology stack.

*Ready to upgrade? Let's discuss how JDE Release 25 can streamline your processes.*
