Discoverer Migration Assessment Connectivity Checklist

Three methods of connectivity can be used to perform the assessment

VPN	Citrix	RDP
VPN Credentials	Citrix Credentials	RDP Credentials
Database Credentials with APPS/EUL Schema Access	Database Credentials with APPS(SQL Developer/Toad)/EUL Schema Access	Database Credentials with APPS(SQL Developer/Toad)/EUL Schema Access
Check whether user access is created for Discoverer Desktop and Discoverer Administrator with Application developer/ System Administrator responsibility	Check whether user access is created for Discoverer Desktop and Discoverer Administrator with Application developer/ System Administrator responsibility	Check whether user access is created for Discoverer Desktop and Discoverer Administrator with Application developer/ System Administrator responsibility
Check for the correct version of the target tool	Check for the correct version of the target tool	Check for the correct version of the target tool
Latest clone of reports from PROD instance is provided	Latest clone of reports from PROD instance is provided	Latest clone of reports from PROD instance is provided

RDP, Citrix, and VPN are three of the most common methods ennVee uses to conduct an assessment of the Discoverer environment. We understand security restrictions are unique for each organization and industry. If you are a governmental, public sector, healthcare, or financial services organization, or have questions about connectivity, please contact our team at **connect@ennvee.com** or +1-888-848-6059.
